```
{
  "_note": "IDs verified against attack.mitre.org (ICS matrix) and the Enterprise matrix as of this build.
  brute_force/impossible_travel/credential_stuffing use Enterprise IDs because they describe identity/auth
  abuse patterns that aren't ICS-specific; the other four use ICS-matrix IDs because they describe behavior
  inside the OT session itself. severity_weight is a simple 0-1 judgment call for this demo (not an official
  MITRE field) used by risk_engine.py.",
